

<b>Scientific Area</b>	Developing Quantum Software q. control, q. engineering, optimal control
<b>Topic title</b>	Dynamic control of non-stationary noise processes in engineered quantum systems
<b>Main host institution</b>	KIT <a href="http://www.kit.edu">www.kit.edu</a>
<b>Supervisor/institution</b>	Anja Metelmann/KIT <a href="http://www.metelmann-group.com">www.metelmann-group.com</a>
<b>Co-Supervisor/institution</b>	F. Schreck/UvA Amsterdam <a href="http://www.uva.nl/en">www.uva.nl/en</a>
<b>Mentor<sup>1</sup>/institution</b>	Alexander Shnirman/KIT <a href="http://www.kit.edu">www.kit.edu</a>
<b>Secondment institution</b>	PTB Braunschweig: <a href="https://www.ptb.de/cms/">https://www.ptb.de/cms/</a> and/or Zurich Instruments: <a href="https://www.zhinst.com/ch/fr">https://www.zhinst.com/ch/fr</a>
<b>Topic description</b>	
<p>The research project is focused on the theory and applications of engineered quantum systems as complex open quantum systems. The project addresses the intricate challenges posed by non-stationary noise processes in the context of continuously driven nonlinear open quantum systems. Specifically, the focus is on developing robust strategies to effectively manage and mitigate the impact of non-stationary noise. This endeavor encompasses a comprehensive approach that takes into account non-classical input scenarios, recognizing the unique complexities they introduce. Additionally, the project aims to provide innovative solutions for measuring relevant quantities within the system, thereby advancing our understanding and control of these dynamic quantum processes</p>	
<b>Recommended applicant's profile</b>	
<p>Master degree in Physics or a related field. Desirable skills: Knowledge about open quantum systems theory, basics on quantum optics and its applications. Experience with engineered quantum systems, for example superconducting circuits and/or optomechanical systems. In addition, interest in working together with experimentalists and proficiency English.</p>	

<sup>1</sup> Mentor: The primary role of the mentors will be to identify and facilitate specific training objectives, advise on any problems faced by the DC, including career matters with an external perspective and provide mediation in the case of disputes.
